

FENTANYL: IT CAN BE LETHAL

Fentanyl is a synthetic opioid substance that is often used to make fake pills or to lace with other drugs without the user's knowledge

Fentanyl is involved in 79% of Gen Z drug deaths, higher than any other age group.

Drug Enforcement Administration testing found that 4 out of every 10 pills have a potentially lethal dosage of fentanyl

WE'RE HERE TO HELP

Join us to Learn:

- Why people of all ages are overdosing because of fentanyl
- How to talk with youth about fentanyl and being safe
- How to reverse an overdose- receive two doses of lifesaving NARCAN.
